COUNTERFEITING IN PRISON

New York Sun. "When I was head keeper in Sing ing," said Police Captain Washburn, "a man named Ulrich was serving a term for counterfeiting. He was an engraver by trade, and so good a workman that the Warden employed him in making dies. Ulrich was taken every day to a large cell especially used in the prison for that class of work. Before being locked in he was searched again. By day a keeper stood outside his cell, watching through the loophole in the strong door. Ulrich was faithful and attentive to his work, and did it well. When the Warden was informed by a prisoner that Ulrich was engraving a plate for a counterfeit bank note he was surprised. Just then, you see, the whigs was in possession of the prison, and the Democrats were trying to turn them out. The Warden and I were Whigs and we didn't propose to let any. body know that counterfeiting had been going on in the prison. We allowed Ulrich to continue his work as usual. After the prisoners had been locked up one night we went to the workroom, sounded the wall and the ceiling, and examined the tools. We couldn't find anything, and concluded we had been misinformed. We didn't know then what a skillful man Ulrich was. He hadn't made his reputation. One day three Scotland Yard detectives came to the prison. They had been sent over by the Bank of England to talk with Ulrich. I was present at the interview, and learned for the first time that Ulrich had been

namufacture and water-mark, and ran away, and forged Bank of England notes into fashion again; I don't know but appeared. It was four years after that what you may. We watched the newspapers, and it was not long before we read the announcement that a remarkably well executed \$3 note of the Connecticut State Bank had been discovered. You may rest assured that neither the Warden nor I let the secret out.

"One March day," says the venerable Bishop Pierce (Methodist) of Georgia, "I rode ten miles through a drenching rain to Flatrock chapel, only to find two persons there, a man and a boy. After waiting a few minutes I said, 'We might as well leave here, as there will be no congregation.' But the man quietly re-sponded, 'Through five miles of pelting rain have I come to hear preaching.' I saw my duty and replied, 'You are right. You are entitled to it.' For one hour I addressed my little congregation and was never listened to with more at-

THE MAGNETIC POLE. -In a recent lecture at Glasgow Prof. Thompson said that the magnetic pole is at present near Boothia Felix, more than a thousand miles west of the geographical pole. In 1657 the position of the needle showed the position of the magnetic pole to be due north. It had been eastward before that; it then began to point westward, and this westward variation continued to increase until 1816, when the maximum was attained; it has since steadily di-minished, and in 1976 it will again point to the true north.

There is one good thing about less year, and that is that leap-year jokes can only be used once in four years.

WHY SHE TOOK THE PAPER.

"I should like to show you a paper which I have," remarked a spruce young man in a no-doubt-you'll-be-glad-to-see me tone to the lackadaisical young lady who responded to his ring.

"Agent?" she inquired.

"Yea."

The young lady turned on her heel and walked toward the inner apartment. He hardly knew whether to consider this an invitation or not, but you don't have to drag an agent in to constitute an invitation in his mind, so he entered.

"Our paper," he began enthusiastically, at the same time drawing a copy from his pocket, "contains short stories. anecdotes and descriptive articles. We have the best serial stories that can be procured. All the most celebrated novelests are engaged to write for us the coming year. Our poetry is unsurpassed, and there is no poet of eminence but will be represented in our columns during the year. We have engaged Alfred Tennyson to contribute a poem every week at a cost of \$13,000 each. We shall print during the year seven unpublished poems found among the papers of the late lamented Henry W. Longfellow. In fact, no one possed of a literary taste can afford to be without our paper."

"Yes?" said the young lady inquiringly.

"Our paper," he continued, "was started only six years ago, but since that time it has reached an unparalleled circulation solely through its intrinsic merit. We employ but few agents and those the most reliable, high-minded young men that we can find. At the present rate of increase our circulation at the end of the next year will be reckoned among the millions. Our attractions for the coming year are luminously grand, superbly magnificent and entirely unequaled, and all for \$3 per year. Of course no beautiful, accomplished young lady like yourself would think of being without it. I shall take your order for one, shall I not?"

"Well," she murmured reflectively, half to herself, "the paper is a pretty good sized one, and bustles are coming Wellington," and she sank back languidly on the sofa, and wondered if din-

SKILLPUL SURGICAL OPERATION.

On Friday last Dr. Thorndike, assisted by the house surgeons, performed an operation upon a man who had been sick with cancer in the City Hospital. The operation was an extraordinary one, says the Herald, but the sick man is dothan ever. He never gave a sign that he ing well, and will in all probability resuspected we had been warned. One day cover. His name is Edward L. Waite. so far advanced that death must have ensued in a short time had nothing been done. The surgeons took away the tallow, wrapped in oil-silk taken from the lower jaw and tongue, removed the floor of the mouth, the glands of the neck and a pickle barrel. Pickles were made by the skin over the jaw and mouth. The contract in the prison. You may just disease was then entirely cut out, and they proceeded to establish artificial orcans, which thus far have performed the necessary service satisfactorily. By drawing up the skin from the neck a lower lip was made, which only falls an inch or so short of closing and forming a nearly perfect mouth, and in time the skin will be drawn up from the chest to fill the vacancy above, and the latter the skin below the chest will be in turn drawn up to take the place of the lap received from above it. The operation is said to be the first of the kind performed successfully in the country.

On Saturday last Dr. Gay assisted by the hospital house surgeons performed a scarcely less extensive operation on Frank Learnard for the same disease. Cancer had got a dead grip on its victim. and to effectually stop its progress it was necessary to remove the whole of the shoulder blade and half the collar bone. This is said to be the sixth operation of the kind performed in this country. Learnard is now in a comfortable condition, and strong hopes are entertained of his ultimate recovery .- [Boston Advertiser, February 7th.
